

ARP flywheel bolt kit

The vibration of the crankshaft that occurs during sudden clutch engagement or high revolutions, This indirectly affects the flywheel vibration and generates load on the bolt.

As a result, the bolts could not withstand the vibrations and began to loosen, creating a very dangerous situation.

This flywheel bolt is a reliable ARP

The reinforced bolts by our company have a tensile strength that is significantly higher than that of the genuine products.

The tightening torque is 1.5 times higher than the previous model, preventing the bolts from loosening and improving driving performance.

Increases safety.

(Strength standard 200000psi/1380MPa)
